WELDING ELECTRODE HOLDER – 600 Amps.

1. Application
This purchase specification specifies the requirements and tests for welding electrode holder-600 amps, in order to optimize the safety of the welder and to ensure satisfactory condition of use during heavy duty manual electric arc welding on carbon steel and alloy steel castings.

2. Compliance with National & International Standard :
The welding electrode holder shall be in general as per IS 2641:1989-semiinsulated 'B' type suitable for current rating up-to 600 Amps at 60% duty cycle use with the characteristics as stated under Technical specifications.

3. General

3.1 The welding electrode holder shall be suitable for use on circuits with OCV up to and including 100V(rms).

3.2 The welding electrode holder shall be suitable to hold electrodes up-to 5 mm diameters and it shall be as light as possible (weight less than 750 gms).

3.3 Design of the electrode holder shall be such that under normal condition of service, it shall be possible to weld with electrode in any position of holder until a stub of 40mm remains without damaging the holder.

3.4 The welding electrode holder shall have provisions for alternative positions for gripping Electrodes to avoid the necessity for bending the electrodes when welding in different positions.

3.5 The electrode holder shall be of "Type B-semi insulated design and construction" as per IS :2641. The electrode holder's jaws along with connector which connect jaw to clamping (where input cable clamped) shall be made from a high copper alloy for maximum conductivity. Connector shall be in form of multiple / single strip that can conduct rated current efficiently.

3.6 The jaws of the holder shall be firmly resistance welded / silver brazed with the holder arms and shall not be joined by brass brazing etc to avoid the chances of separation under over heating of jaws during accidental electrode shorting with the job.

3.7 Cable entry to the welding holder shall be so designed that the risk of damage due to continual flexing of cable is kept to minimum. The insulation of the cable shall enter the holder to a depth not less than 50mm and provision shall be made to clamp the cable to avoid any pull to be transmitted to the joint in normal case.
