NIT No. : 20150032/CNC/CC/4/3-444 **Dated 23/12/15**

Brief About Machine:

Working: This machine is used to strip and cut solid copper conductors of required length from an insulated role. The main assemblies of the machine are as follows:

1. Decoiler: Gear and shaft driven by DC servo motor with break. It is used to unwind the conductor from the role at variable speed as per tension in the conductor loop.
2. Tensioner: It is mechanical tensioner with analog feedback to PLC. It is used to provide the tension in the loop of unwounded conductor.
3. Straightener: It is belt and pulley drive with DC servo motor and double encoder feedback for accurate measurement of conductor length.
4. Stripper : It consists of four no. of steel brushes (2 for horizontal and other 2 for vertical) driven at fixed speed by induction motors. Each pair of brushes can be set by levers and pneumatic cylinders from brush position to neutral position.
5. Shearing and tilting table: driven by pneumatic cylinders.
6. Vacuum Unit: fitted with impeller and water pipe for sucking and accumulating the dust generated out of stripping of conductor.
7. HMI : To feed the total and stripping length, movement speed of conductor.

Existing system:

1. DC servo motors with break for decoiler and straightener : 8KW, 170 VDC, 54 A, 1350 rpm with external fan
